Claude Code Master Prompt — MedicalEquipment.Africa SEO Audit

Copy everything below this line into Claude Code

PROJECT BRIEF

I'm running a full SEO competitive analysis for two African directory sites. We are in **Phase 1 (Research & Audit)** — collect all data first, document everything, create content last.

Site 1 (do this now): https://www.medicalequipment.africa/ **Site 2 (next session):** Irrigation directory — TBC

The goal of this session: run all audits, save all findings as structured markdown files, and produce one master Word document (.docx) that captures everything.

FULL PROCESS MAP (for reference — do not skip phases)

Phase	What happens	Status
1. Research & Audit	Competitor discovery, gap analysis, keyword mapping, schema audit, technical SEO	← YOU ARE HERE
2. Validate	Plug keywords into Semrush/Keywords Everywhere, confirm volumes, score difficulty	Pending
3. Document	Master findings report, competitor profiles, keyword master list, content priority matrix	Builds during Phase 1
4. Content Creation	Write priority pages using briefs, implement schema, schedule GBP posts	Pending
5. Track & Iterate	Rank tracking setup, monthly reporting, content gap refills	Pending

---

CONTEXT ALREADY GATHERED (from Phase 1 research)

My site: medicalequipment.africa

- A verified refurbished medical equipment supplier directory covering all of Africa
- The domain is an exact-match keyword asset — major SEO advantage

- Subtitle already says "Verified Refurbished Medical Equipment"

3 competitors identified:

Competitor	URL	Threat Level	Key Weakness
Medhospafrica	medhospafrica.com	Medium	No country pages, no buyer content, dated UI
Afrotrade Medical	medical.afrotrade.net	Low (dying)	Static HTML, no mobile, no search/filter
AMSP Africa	amsp.africa	Niche only	Closed/members-only, PPE focus, AU-backed

5 content gaps already identified:

1. Country-specific landing pages (Kenya, Nigeria, Ghana, Tanzania, Ethiopia)
2. Equipment category pages with buying guides (ultrasound, X-ray, ICU, surgical)
3. Government tender & procurement content
4. Refurbished / second-hand medical equipment content hub
5. Regulatory & import guidance by country

20 buyer-intent keywords mapped:

- medical equipment suppliers Kenya / Nigeria / Ghana
- buy hospital equipment Nigeria
- refurbished medical equipment Africa
- ultrasound machine suppliers Africa
- verified medical equipment suppliers Ghana
- hospital bed suppliers South Africa
- medical device importers East Africa
- ICU equipment suppliers Africa
- where to buy surgical equipment Africa
- medical equipment tender Africa 2025
- how to import medical equipment Kenya
- SAHPRA approved medical device suppliers
- cheapest medical equipment suppliers Africa
- diagnostic equipment Africa suppliers
- medical equipment directory Africa

- X-ray machine suppliers Nigeria
- NGO medical equipment procurement Africa
- second hand hospital equipment Africa
- physiotherapy equipment suppliers Africa
- list of medical equipment companies Africa

Trust gaps vs competitors:

- No supplier verification badges on any competitor
- No case studies / procurement stories anywhere
- No regulatory approval filters (KEBS, NAFDAC, SAHPRA)
- No buyer reviews per listing
- My site already has "Verified Refurbished" branding — needs expanding

---

FILE STRUCTURE TO CREATE

```
/seo-audit/
  README.md                        ← Master index with links to all files
  01-competitor-analysis.md        ← Detailed competitor profiles
  02-schema-audit.md               ← Schema findings + JSON-LD code
  03-technical-seo.md              ← Technical checklist pass/fail
  04-competitor-xray-table.md      ← Side-by-side comparison table
  05-keyword-master-list.md        ← All 20+ keywords with intent and notes
  06-content-gap-analysis.md       ← The 5 gaps with detail
  07-content-briefs/
      kenya-suppliers-page.md
      nigeria-suppliers-page.md
      refurbished-hub-page.md
      kenya-import-guide.md
      ultrasound-category-page.md
  08-gbp-posts.md                  ← 10 Google Business Profile posts
  09-strategic-advantages.md       ← 3 immediate wins to exploit
  10-phase2-checklist.md           ← What to do when moving to Semrush validation
  medicalequipment-africa-seo-audit.docx  ← Master Word doc compiling everything
```

TASKS — RUN IN ORDER

Tell me when each task is complete before moving to the next.

TASK 1 — Schema Audit

Fetch https://www.medicalequipment.africa/ and extract the page source.

Find and evaluate all existing schema markup. Check for:

- Schema types present (Organisation, LocalBusiness, WebSite, BreadcrumbList, ItemList, FAQPage, Product, SearchAction)
- Is LocalBusiness schema present and fully populated?
- Is there a SearchAction on the WebSite schema?
- Are schema types appropriate for a directory site?

Output:

1. List every schema type found with verdict: USEFUL / WEAK / BROKEN / MISSING
2. For HIGH priority missing schema, generate clean JSON-LD with real placeholders for this site
3. Priority order for implementation

Save as: `/seo-audit/02-schema-audit.md`

TASK 2 — Technical SEO Checklist

Fetch https://www.medicalequipment.africa/ and check the following. For each item output: ✅ PASS / ⚠️ WEAK / ❌ FAIL + a fix note.

Checks:

- Title tag: present? length 50-60 chars? primary keyword included?
- Meta description: present? length 150-160 chars? has CTA?
- H1 tag: present? matches primary keyword? only one H1?
- H2 tags: present? logically structured?
- Image alt tags: images have descriptive alt text?
- Canonical tag: present and correct?
- robots.txt: accessible at /robots.txt?
- Sitemap: accessible at /sitemap.xml?
- Open Graph tags: present for social sharing?
- Mobile viewport meta tag: present?
- HTTPS: site running on HTTPS?
- Page speed signals: any render-blocking resources visible in source?
- Internal links: homepage linking to category/country pages?

Save as: `/seo-audit/03-technical-seo.md`

TASK 3 — Competitor X-Ray (Business vs Competitor)

Fetch these URLs and extract their services, locations targeted, trust signals, and content structure:

- https://medhospafrica.com
- https://medical.afrotrade.net
- https://amsp.africa

Then compare against https://www.medicalequipment.africa/

Output:

1. A side-by-side markdown table comparing: Services | Target locations | Content types | Trust signals | Schema present | Mobile-friendly | Last updated
2. A detailed profile for each competitor (what they do well, what they do badly)
3. 3 strategic advantages medicalequipment.africa can exploit immediately — be specific, not generic

Save as: `/seo-audit/04-competitor-xray-table.md` and `/seo-audit/01-competitor-analysis.md`

TASK 4 — Content Briefs (5 priority pages)

Write a full SEO content brief for each page. Use this structure for every brief:

```
## [Page Title]
**Primary keyword:**
**Secondary keywords (3):**
**Search intent:** (transactional / informational / navigational)
**Target audience:**
**Recommended URL slug:** /[slug]
**H1:**
**Suggested H2 structure:** (list them)
**Word count:**
**Key sections to include:**
**Internal links to add:**
**External links / sources to reference:**
**Schema type to apply:**
**Competitor gap this fills:**
**[ACTION NEEDED]** — any information only you can provide (supplier names, local contacts etc.)
```

Write briefs for:

1. Kenya medical equipment suppliers directory page
2. Nigeria medical equipment suppliers directory page
3. Refurbished medical equipment Africa — hub page
4. How to import medical equipment into Kenya — regulatory guide
5. Ultrasound machines Africa — category page (use as template for all equipment categories)

Save each as individual files in: `/seo-audit/07-content-briefs/`

TASK 5 — Google Business Profile Posts (10 posts)

Based on what competitors are NOT doing (no local keywords, no CTAs, no urgency), generate 10 high-converting GBP posts for medicalequipment.africa.

Rules for each post:

- Max 1,500 characters
- Must include: a medical equipment keyword + African regional reference (city or region)
- Must have an urgency-driven CTA: Browse Directory / Submit Your Company / Get Verified Today / Find a Supplier Now
- Must reference a specific service angle (verified suppliers / refurbished equipment / country listings / category search)
- Tone: professional, trustworthy, local, action-driven
- Vary the angles: don't repeat the same hook

Topics to cover across the 10 posts:

1. General directory awareness — what the site does
2. Refurbished equipment angle — cost savings
3. Kenya supplier focus
4. Nigeria supplier focus
5. East Africa regional post
6. West Africa regional post
7. Supplier listing CTA — invite suppliers to join
8. Government/NGO procurement angle
9. Equipment category spotlight (e.g. ultrasound or ICU)
10. Trust/verification angle — why verified matters

Save as: `/seo-audit/08-gbp-posts.md`

TASK 6 — Phase 2 Validation Checklist

Create a checklist document for what to do after this audit when moving into keyword validation with Semrush or Keywords Everywhere.

Include:

- Which keywords from our list of 20 to check first (prioritise by likely volume)
- What metrics to capture for each keyword (volume, difficulty, CPC, SERP features)
- How to identify new keywords from Semrush's suggestions
- What domain authority score to target for competition benchmark
- How to identify link-building opportunities from competitor backlink profiles
- What to do if a keyword has zero volume (and when that's still worth targeting)

Save as: `/seo-audit/10-phase2-checklist.md`

TASK 7 — Master Word Document

Using the docx npm library, compile all findings into one professionally formatted Word document.

Document structure:

```
Cover page: "MedicalEquipment.Africa — SEO Audit & Content Strategy"
            Subtitle: "Phase 1: Research & Findings"
            Date: [today's date]

1. Executive Summary (1 page — key findings and top 3 priorities)
2. Process Overview (the 5-phase plan with current status highlighted)
3. Competitor Landscape (profiles + X-ray table)
4. Technical SEO Audit (checklist with pass/fail)
5. Schema Audit (findings + JSON-LD code blocks)
6. Content Gap Analysis (the 5 gaps explained)
7. Keyword Master List (table of all 20 keywords)
8. Content Briefs (all 5 briefs)
9. Google Business Profile Posts (all 10 posts)
10. Strategic Advantages (the 3 immediate wins)
11. Phase 2 Next Steps (validation checklist)
12. [ACTION NEEDED] Items (consolidated list of everything requiring client input)
```

Formatting requirements:

- Font: Arial throughout
- Headings: Bold, properly sized (H1=18pt, H2=14pt, H3=12pt)
- Tables: light blue header row shading, grey alternating rows
- Code blocks: monospace font, light grey background
- Cover page: centred, no header/footer
- All other pages: page numbers in footer, site URL in header
- Use real bullet points (not unicode dashes)
- Include a Table of Contents after the cover page

Save as: `/seo-audit/medicalequipment-africa-seo-audit.docx`

TASK 8 — README Index

Create a master README.md that:

- Lists all files created with a one-line description of each
- Shows the full process map with Phase 1 marked complete
- Lists all [ACTION NEEDED] items consolidated in one place
- Has a "Next Session" section explaining what to do for the irrigation site

Save as: `/seo-audit/README.md`

IMPORTANT NOTES

- Flag anything requiring my input with **[ACTION NEEDED]**
- If a URL can't be fetched, note it and proceed with what you know
- Do not write placeholder content — if you don't know something, say so and flag it
- Save every file as you complete each task — don't wait until the end
- The .docx is the client-facing deliverable; the .md files are the working documents
- When all tasks are done, confirm the full file list created

Start with Task 1. Confirm when done before proceeding to Task 2.
